Shift Networks announces compatibility with Nortel handsets

Calgary, Alberta – Shift Networks, a leading provider of hosted VoIP business telephone solutions, announced today that their network is now compatible with certain Nortel IP telephone handsets and clients currently using these Nortel handsets can easily move their telephone services to Shift.

“Voice over IP is the most advanced communications technology available, says Albert Walle, Manager, Network and Applications, Shift Networks.” “With Shift Networks, a Small and Medium Sized Business can leverage the investment of their current equipment while continuing to manage their growing business,” he adds.

The compatible models include the Nortel IP 8800 Series phone, the Nortel LIP 6830 phone, and the Nortel LVP 2890 Video Phone. Model numbers can be found by checking either the bottom or the back of the phone. Other Nortel phones and systems may also be compatible and potential clients can contact Shift Networks toll free at 1-866-770-3001 extension 1 to determine if their devices are a match.

For more information on Shift Networks’ services or to access an online pricing estimation tool, individuals can simply visit the Shift Networks website at: www.shiftnetworks.com.
